#### 1. INTRODUCTION

We are going to show how to create an unbeatable AI agent that the classic <u>VEHICLE & PEDESTRIAN</u> <u>PETECTION</u>. You will learn the concept of that is widely and successfully used across the fields like **Artificial Intelligence**. We are proposing an artificial intelligence based system to detect motion of pedestrians on road, cars, bikes and buses. This project use machine learning technique, trained from XML files on how the vehicles look like and how to identify them.

## 2. PROJECT DETAILS

Our Project will detect and recognize vehicles and pedestrians motion in a video. Video should be in avi or mp4 format. We are also working on counting how many vehicles and pedestrians passed from the road.

Detect Vehicles

Using open-cv, the system detects vehicles bikes, cars and buses.

• Detect People on pedestrian

Detect people while moving.

### **2.1 PEAS**

PEAS	Detail		
Р	Detect the vehicles and pedestrian movement		
Е	Car, Bus ,Bike, Pedestrian, Road		
Α	Screen/GUI		
S	Web Cam		

#### 2.2 ENVIRONMENT TYPE

Deterministic / Stochastic	Fully / Partially Observable	Episodic / Sequential	Static / Dynamic /Semi Dynamic	Discrete / Continuous	_	Known / Un Known
Deterministic	Fully observable	Sequential	Static Dynamic	Continuous	Multi Agent	Unknown

### 2.3 AGENT TYPE

Applicable Type	Reason		
Simple	Knowledge of recognize vehicles and pedestrians detection.		
Reflex	Detect people while moving.		
Goal	The goal is to detect the moving vehicles and humans in a video.		
Utility	Utility Not a utility based.		
Learning	Trained from data file (XML) on how the vehicles look like? Performance depends on data.		

#### 2.4 AGENT ORGANIZATION

Applicable Organization Type	Reason
Atomic	Not Atomic.
Structures	Not Structured.
Factored	Lie in factored type because it is basically a <u>VEHICLE &amp; PEDESTRIAN MOTION DETECTION</u>

## 3.2. Major Steps in your Code and Libraries used

Open CV code has been used to detect motion of objects like Humans, cars, bike and buses. Tkinter used to create GUI of project.

Its major steps include following along with the information of libraries used:

# Step 1: Reading, Writing and Displaying Images. ... OpenCV

- OpenCV reads a given image in the BGR format by default. So, you'll need to change the color space of your image from BGR to RGB when reading images using OpenCV
- o By default, the *imread* function reads images in the BGR (Blue-Green-Red) format. We can read images in different formats using extra flags in the *imread* function:
- o cv2.IMREAD\_COLOR: Default flag for loading a color image
- o cv2.IMREAD\_GRAYSCALE: Loads images in grayscale format

# Step 2: Resizing Images...OpenCV

 Machine learning models work with a fixed sized input. The same idea applies to computer vision models as well. The images we use for training our model must be of the same size.

# Step 3: Basic segmentation. ... OpenCV

- O Thresholding is an image **segmentation** method. It compares pixel values with a threshold value and updates it accordingly. OpenCV supports multiple variations of thresholding. A simple thresholding function can be defined like this: if Image(x, y) > threshold, Image(x, y) = 1
- $\circ$  Otherwise, Image(x, y) = 0
- A simple application of image thresholding could be dividing the image into its foreground and background.

# Step 4: Image Filtering. ... OpenCV

o Gaussian filtering is also used for image blurring that gives different weights to the neighboring pixels based on their distance from the pixel under consideration.

# Step 5: Image Contours. ... OpenCV

- o A contour is a closed curve of points or line segments that represents the boundaries of an object in the image. Contours are essentially the shapes of objects in an image.
- o Unlike edges, contours are not part of an image. Instead, they are an abstract collection of points and line segments corresponding to the shapes of the object(s) in the image.
- We can use contours to count the number of objects in an image, categorize objects on the basis of their shapes, or select objects of particular shapes from the image.

# Step 6: Image Dilation. ... OpenCV

o It is useful in joining broken parts of an object.

# Step 7: Drawing Rectangles Around moving Objects.....OpenCV

o **OpenCV-Python** is a library of Python bindings designed to solve computer vision problems. cv2.rectangle () method is used to draw a rectangle on any image.

#### 3.3. Code

```
from tkinter import *
root=Tk()
root.configure(background="#87CEEB")
```

### **CODE FOR PEDESTRIAN DETECTION**

```
def people(): # method for pedestrian detection
  import cv2
  import numpy as np
  cap = cv2.VideoCapture('pedestrians.avi')
  frame width = int( cap.get(cv2.CAP PROP FRAME WIDTH))
  frame_height =int( cap.get( cv2.CAP_PROP_FRAME_HEIGHT))
  #----for avi file
  fourcc = cv2.VideoWriter_fourcc('X','V','I','D')
  out = cv2.VideoWriter("output.avi", fource, 5.0, (1280,720))
  #----- for mp4 files
  #fourcc = cv2.VideoWriter_fourcc(*"X264")
  #out = cv2.VideoWriter("output.mp4", fourcc, 15.0, (1280, 360))
  ret, frame1 = cap.read()
  ret, frame2 = cap.read()
  print(frame1.shape)
  while cap.isOpened():
     diff = cv2.absdiff(frame1, frame2)
     gray = cv2.cvtColor(diff, cv2.COLOR_BGR2GRAY)
     blur = cv2.GaussianBlur(gray, (5,5), 0)
     , thresh = cv2.threshold(blur, 20, 255, cv2.THRESH_BINARY)
     dilated = cv2.dilate(thresh, None, iterations=3)
     contours, _ = cv2.findContours(dilated, cv2.RETR_TREE, cv2.CHAIN_APPROX_SIMPLE)
     for contour in contours:
       (x, y, w, h) = cv2.boundingRect(contour)
       if cv2.contourArea(contour) < 900:
          continue
       cv2.rectangle(frame 1, (x, y), (x + w, y + h), (0, 255, 0), 2)
       cv2.putText(frame1, "Status: {\}".format('Movement'), (10, 20),
cv2.FONT HERSHEY SIMPLEX,1, (0, 0, 255), 3)
     #cv2.drawContours(frame1, contours, -1, (0, 255, 0), 2)
     image = cv2.resize(frame1, (1280,720))
     out.write(image)
     cv2.imshow("People", frame1)
     frame1 = frame2
     ret, frame2 = cap.read()
     if cv2.waitKey(44) == 27:
       break
  cv2.destroyAllWindows()
  cap.release()
  out.release()
```

#### **CODE FOR BUS DETECTION**

```
def bus():
  import cv2
  cascade src = 'Bus front.xml'
```

```
video src = 'bus1.mp4'
cap = cv2.VideoCapture(video src)
fgbg=cv2.createBackgroundSubtractorMOG2()
car cascade = cv2.CascadeClassifier(cascade src)
while True:
  ret, img = cap.read()
  fgmask=fgbg.apply(img)
  if (type(img) == type(None)):
     break
  gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)
  cars = car_cascade.detectMultiScale(gray, 1.16, 1)
  for (x, y, w, h) in cars:
     cv2.rectangle(img,(x, y),(x+ w, y +h),(0,0,255),3)
  cv2.imshow('video', img)
  if cv2.waitKey(33) == 27:
     break
cv2.destroyAllWindows()
```

#### CODE FOR BIKE DETECTION

```
def bike():
```

```
import cv2
cascade_src = 'two_wheeler.xml'
video_src = 'two_wheeler2.mp4'
cap = cv2.VideoCapture(video_src)
fgbg = cv2.createBackgroundSubtractorMOG2()
car cascade = cv2.CascadeClassifier(cascade src)
while True:
  ret, img = cap.read()
  fgbg.apply(img)
  if (type(img) == type(None)):
     break
  gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)
  cars = car_cascade.detectMultiScale(gray,1.1, 2)
  for (x, y, w, h) in cars:
     cv2.rectangle(img,(x, y),(x + w, y + h),(0,255,255),2)
  cv2.imshow('video', img)
  if cv2.waitKey(33) == 27:
     break
```

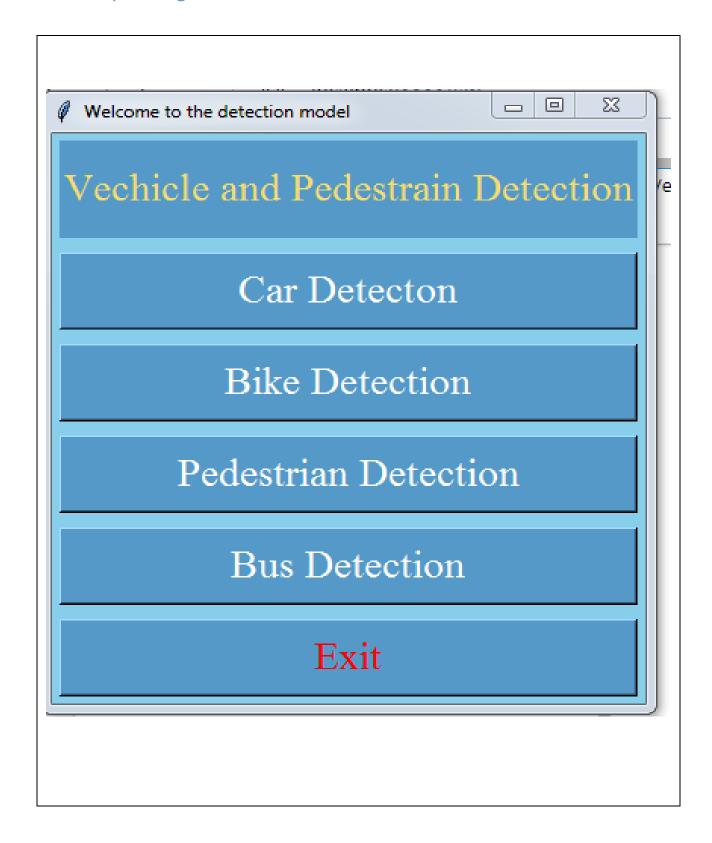

cv2.destroyAllWindows()

#### CODE FOR CAR DETECTION

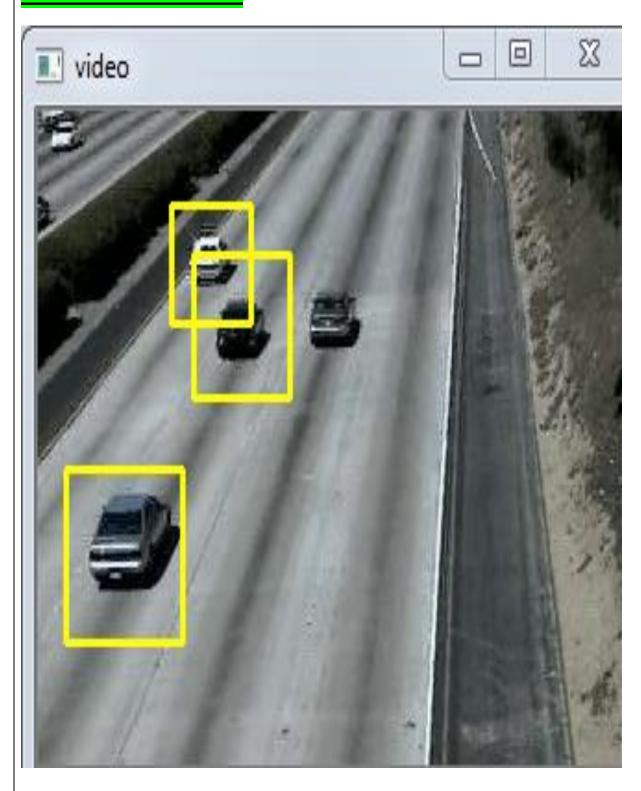

```
def cars():
  import cv2
  cascade_src = 'cars.xml'
  video src = 'car1.avi'
  cap = cv2.VideoCapture(video_src)
  fgbg = cv2.createBackgroundSubtractorMOG2()
  car cascade = cv2.CascadeClassifier(cascade src)
  while True:
```

```
ret, img = cap.read()
     fgbg.apply(img)
     if (type(img) == type(None)):
       break
     gray = cv2.cvtColor(img, cv2.COLOR_BGR2GRAY)
     cars = car_cascade.detectMultiScale(gray, 1.1, 2)
     for (x, y, w, h) in cars:
       cv2.rectangle(img,(x,y),(x+w,y+h),(0,255,255),2)
     cv2.imshow('video', img)
    if cv2.waitKey(33) == 27:
       break
  cv2.destroyAllWindows()
def exit():
  root.destroy()
root.title("Welcome to the detection model")
                                     CODE FOR GUI
Label(root, text="Vehicle and Pedestrain Detection", font=("times new

# **BUS DETECTION:**

# 4. PROJECT CONCLUSION

Application of AI concepts studied during course work, such that to attain high competency in market.

The area implemented is Computer Vision.

The Vehicle detection is a very important component in traffic surveillance and automatic driving. Vehicle detection is still an important challenge in computer vision. We are proposing an artificial intelligence based system to detect motion of pedestrians on road, cars, bikes and buses. This project use machine learning technique, trained from XML files on how the vehicles look like and how to identify them.
